REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: Applicant recites a control device for controlling an air operated door on a bottom dump railcar. The device comprises a housing support on the railcar and a piston moveable in the housing between a door closing position and a door opening position. The positions are responsive to air pressure and the piston acts in a first direction to cause the door to open. Air pressure also acts on the piston to move the door to its second, closed position. The system is further comprised of a control element that prevents air pressure from acting in the first, open direction on the piston until the air pressure exceeds a predetermined amount. The control element keeps the doors closed and prevents them opening prematurely.

The prior art of Rosenbaum, discloses a double acting piston, like that of the present invention as well as a control element 158 that is responsive to a predetermined air pressure. However, the system of Rosenbaum does not allow the doors to close until a predetermined air pressure is reached. The Rosenbaum system operates in a manner directly opposite from the present invention, and prevents the doors from closing while the instant invention prevents the doors from opening.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
